

PRODUCT FRONTEND TECHNICAL ASSESSMENT

Things to keep in mind

You're expected to submit your answer as soon as possible and **must still be within 24 hours** to complete all challenges; This time will be counted from the time this email was opened.

You can use Google, LLM tools while taking the test, however, make sure you are the person who actually took the test;

In case of any change in your progression and have to extend the deadline, it must be updated as soon as possible via email and be accepted by our HR Team.

Test result note

All of the source code, screenshots of running results, relevant information must be attached in your result

Please upload all of them into 1 folder and submit via Link

Screenshots of running results must be attached in your result.

Suggestions

You can use libraries/frameworks like React, Angular, Vue, Material UI, Ant Design, etc.

A text file describing your approach (which libraries/tools were used and why)

Source code (excluding node_modules , vendor , .git , built, and minified files) compressed in a zip file.

A README.md file describing how to set up & start the project.

CHALLENGE

Implement a “**Product Showcase**” Application (It can be any product you like)

The app should have the following flow:

- **Login screen**

- + A simple form to enter a **username** and **password**.
- + On submit, call [/api/login](#) and store the tokens appropriately.

- **Product list Screen**

- + Fetch and display the list of product items from [/api/product](#).

- **Product Detail Screen**

- + Fetch and display the detail of the product item from [/api/product/{id}](#).

- **Logout feature**

- + Call [/api/logout](#) to revoke the token and navigate back to the login screen.

Specific requirements:

- You will be responsible for both **designing the Mock APIs**
- + Mockoon is recommended to design the Mock APIs, the mock file (mockoon-data.json) should be attached to your source code.
- + You can use <https://www.dicebear.com/> or <https://ui-avatars.com/> for image placeholders.
 - Product list screen must have:
 - + At least 100 products.
 - + Must have at least data for product name, product image, product description, actions. (button to view detail)
 - + Filter and Search feature is required:
 - Search is for product name.
 - Filter is required for all the product data.

- Layout displays well on screens 1280px wide and up for PC, and below for Mobile.
- Source code should be organized with a clear structure, use sensible variable names, and must be free of spelling errors.
- **Containerization:**
 - + Write a [Dockerfile](#) for your Frontend application.
 - + Write a [docker-compose.yml](#) file that orchestrates two services:
 - frontend: Your React/Next.js application.
 - mock-api: A container running the official Mockoon CLI image ([mockoon/cli](#)), loading the [mockoon-data.json](#) file you exported in Phase 1.
 - + Ensure that your frontend container can successfully communicate with the mock-api container.
- You **must** submit a `DECISION_LOG.md` file (can be written in Vietnamese), attached to the source code to show the progress of you doing the test. Example:

```
# Decision Log

## [HH:MM] - Mô tả ngắn

### Tình huống
Tôi đang làm gì, gặp vấn đề gì?

### Các phương án đã cân nhắc
```

028 6262 4400

adventure@geekup.vn

- Phương án A: ...
- Phương án B: ...

Quyết định
Chọn phương án nào và tại sao?

Kết quả
Quyết định có đúng không? Có phải quay lại không?

[HH:MM] - Nếu dùng AI

Prompt đã dùng
Copy nguyên prompt đã gửi cho AI.

Kết quả AI trả về
Tóm tắt AI trả lời gì.

Đánh giá của tôi
Kết quả AI có đúng không? Tôi đã sửa/điều chỉnh gì?
Tại sao tôi tin/không tin kết quả của AI?
